

## RF Nano Awarded Army STTR Program Phase I Funding For Carbon Nanotube Antennas

NEWPORT BEACH, June 29, 2006 –

RF Nano Corporation™, the leader in developing carbon nanotubes for analog electronics, was awarded a Phase I proposal in the United States Army Small Business Technology Transfer (STTR) Program to investigate Carbon Nanotube Antennas. Phase I project will focus on the synthesis and manufacture of long carbon nanotube for antennas. In addition, significant device characterization and process optimization are included in the project scope.

### **About RF Nano**

RF Nano Corporation™ is the leader in developing a CMOS compatible suite of discrete, wafer and integrated circuit products based on the outstanding analog electronic properties of carbon nanotubes. With power densities 100 times silicon and 20 times greater than gallium arsenide, intrinsic cutoff frequencies in the Terahertz, inexpensive growth, and the ability to integrate with standard CMOS processes, RF Nano's extremely robust carbon nanotubes devices will revolutionize the \$60 billion analog and mixed signal semiconductor markets. Founded in 2005 and based in Orange County, CA, the company is privately held and backed by Okapi Venture Capital. For more information, please visit [www.RFNano.com](http://www.RFNano.com).
